Allowable Subject Matter

Claims 1-8 are allowed.

The following is an examiner's statement of reasons for allowance:

As to Claim 1, the prior art of record taken alone or in combination, fails to disclose or render obvious first scanning means, light separation means, second scanning means, and an objective optical system, said first scanning means scanning said pulse excitation light, emitted by said laser light source, in a first direction, said light separation means guiding said pulse excitation light, arriving from said first scanning means, to said second scanning means and guiding said fluorescences, arriving from the second scanning means, to said streak camera, said second scanning means scanning said pulse excitation light, arriving from said light separation means, in a second direction perpendicular to said first direction and guiding said fluorescences, output and arriving from said objective optical system, to said light separation means so that said fluorescences pass through the same optical path that said pulse excitation light passed through in being directed from said light separation means to said second scanning means, and said objective optical system converging and illuminating said pulse excitation light that has been scanned in said first direction and second direction respectively onto respective scanning points in said sample and outputting the fluorescences, which are emitted from said respective scanning points upon illumination of said pulse excitation light, to said second scanning means, in combination with the rest of the limitations of the claim.

As to Claim 6, the prior art of record taken alone or in combination, fails to disclose or render obvious a third step of scanning said pulse excitation light, which has been scanned in said first direction, in a second direction perpendicular to said first direction; a fourth step of

converging and illuminating said pulse excitation light, which has been scanned in said first direction and second direction, respectively, onto respective scanning points inside said sample; a fifth step of recording the variations with time of the fluorescence intensities of said fluorescences that are emitted from said respective scanning points by the illumination of said converged pulse excitation light; and a sixth step of calculating the fluorescence lifetimes based on said recorded variations with time of the fluorescence intensities, and creating a fluorescence lifetime distribution image, wherein the fifth step is performed using a streak camera, in combination with the rest of the limitations of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion
